

# Kazam.In Practical-Task

- 1.) Create an application to display images in a paginated fashion. Use React with functional componenets.
  - 2.) Images should be loaded using unsplash api. (<https://unsplash.com/>)
  - 3.) Implement lazy loading for images.
  - 4.) Give a text box on top of the page to search images. For e.g. if I click type computer and submit, it should display images related to computer.
  - 5.) The search should work with GET param in url. For e.g. if I navigate to localhost:3000?q=computer, the page should display images related to computer.
  - 6.) UI should be clean. Use bootstrap library.
- All the best.
